## SWISS QUALITY FOR DEMANDING IT PROJECTS

AdNovum is among the elite Swiss Information Technology companies for demanding IT assignments. Our solutions are created using the highest quality standards in the tradition of Swiss precision engineering.

Our expert teams are committed to developing and maintaining software and security solutions that satisfy rigorous technical and commercial requirements. We accompany your IT project throughout all of its phases, from consulting, business analysis and engineering, to development, testing and integration, and finally, to support and maintenance.

### Continuity and innovative strength

AdNovum was founded in 1988 with the vision of creating high-quality software. Our company has risen from humble origins to become a leading software house thanks to its innovative strength and its highly motivated team. At present, there are over 250 employees in Zurich, Bern, Budapest, and Singapore.

For our customers, we develop secure and reliable solutions that can be integrated efficiently and flexibly into existing systems and continually expanded with new components. Our customized consulting services and software solutions help our customers achieve a strong and agile market presence.

### Solution-oriented engineering culture

AdNovum's management consists of long-term employees. The distinctive solution-oriented engineering culture with a flat hierarchy and short decision cycles characterizes our company. This approach is pillared by the commitment and loyalty of our employees.

A key success factor is our commitment to continuing education for all employees. We cultivate a trusting relationship to both employees and customers that we feel enables outstanding performance and superior software solutions.

«WE BELIEVE IN QUALITY,  
FROM THE TECHNOLOGY TO THE STAFF.»

*Bettina Niklaus, Quality Engineer*

Services

## SEAMLESS SERVICE FROM ONE SOURCE

### Application development & integration

We create secure and reliable software solutions that are decisive factors to your company's success. After a careful analysis, we combine existing with new components and products from leading suppliers with open-source software and open standards. This results in superior business solutions that can easily be adjusted to new requirements.

### Security engineering

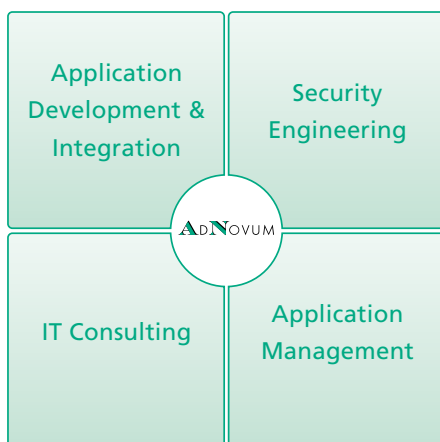

We assure that your data and resources are effectively protected across all channels by considering security aspects from the very start of the project. Key issues are software architecture, authorization, and encryption. For identity and access management, we deploy product components from our proven security framework Nevis.

### IT consulting

Our project knowledge flows into our consulting services. As a customer, you benefit from the competencies that we have acquired through our broad project portfolio. Our consultants offer engineering qualifications and far-reaching practical experience. They are able to advise you competently on issues of architecture, security, testing, and technology.

### Application management

We offer tailor-made maintenance and support packages, both for AdNovum-created and third-party systems. Our service contracts are individually drafted and oriented to your company's needs. This allows you to carefully leverage available resources to ensure proper care and continual optimization of your software landscape.

«OUR SKILLS ARE AS DIVERSE AS  
YOUR BUSINESS REQUIREMENTS.»

*Gérard Roos, Technical Project Manager*
