IT Architecture Assessment

Does your IT architecture help you to efficiently implement your business strategy?

When you implement a new business strategy, speed, cost and quality are key. An IT architecture that supports a rapid adaptation of existing processes will give you the decisive competitive edge. Examine your IT architecture carefully and identify valuable optimization potential by means of an IT architecture assessment.

Initial situation

Application systems that have grown over the years are often confusing, complex, error-prone and rarely well documented. Since general conditions (budget, time to market, etc.) affect architecture decisions, there are often compromises that have a direct impact on future extensions and adaptations. It is therefore necessary to regularly reconsider the current IT architecture and reassess the target architecture.

Our services

- Workshop: We examine your current IT architecture and identify areas requiring optimization.
- Analysis: Based on the workshop results we develop a target architecture and a roadmap for the architecture's optimization.
- Report: We then draw up a report including the results of the analysis with target architecture and roadmap.
- Presentation: Finally, we present you the results and plan the next steps for the implementation of the suggested measures with you.

Your benefits

An IT architecture assessment provides you with an independent and comprehensive review of your IT architecture. You profit from many years of experience and a vast know-how we gained while implementing infrastructure projects for companies and government offices. We know the critical points and which measures are suited for designing and optimizing sustainable IT architectures. We will be happy to also advise you on the specification of new architectures, or support you in implementing the measures after an assessment.
